# Code vs Visual

```
\begin{lemma}
    Lorem ipsum dolor sit
    ... eget dolor.

    \begin{proof}
        Aenean massa. Cum
        ... quis enim.
    \end{proof}
\end{lemma}
```

**Lemma 1.9.** *Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Aenean commodo ligula eget dolor.*

*Proof.* Aenean massa. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Donec quam felis, ultricies nec, pellentesque eu, pretium quis, sem. Nulla consequat massa quis enim. □

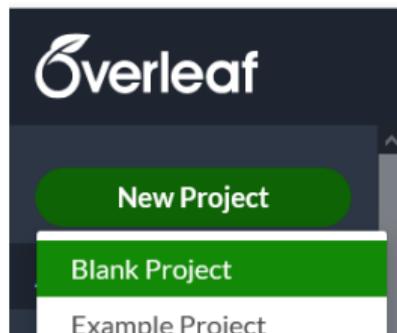

# Overleaf

**LaTeX** is the programming language.

**Overleaf** is a website where you can write and compile LaTeX.

**Visual Studio Code** is a desktop app where you can write and compile LaTeX.

**MiKTeX** does compilation for Visual Studio code.

For now: Overleaf.

Want VS Code? Instructions at  
[vkuhlmann.com/latex/installation](http://vkuhlmann.com/latex/installation)

# Vincents favorite package: \usepackage[bookmarksnumbered]{hyperref}

The screenshot shows a LaTeX editor interface. On the left, a table of contents tree is visible, with sections like Preface, Introduction, and various chapters under 1 Sets and 2 Models. A specific section, 2.2.2 Legitimate Substitutions, is highlighted with a gray background. The main workspace shows a document page with the following text:

and  $a = a_1, \dots, a_n$  and  $b = b_1, \dots, b_n$  tuples of elements of  $M$  and  $N$ , respectively, then  $\vec{a} \equiv_{\text{qf}} \vec{b}$  implies  $\vec{a} \equiv_T \vec{b}$ .  
Write  $\vec{a} \equiv_{\Gamma} \vec{b}$  if for every formula  $\phi(x_1, \dots, x_n)$  from  $\Gamma$  we have:

$$M \models \phi(a_1, \dots, a_n) \Leftrightarrow N \models \phi(b_1, \dots, b_n).$$

We shall apply this for  $\Gamma$  the set of quantifier-free  $L$ -formulas and for  $1$  simple  $L$ -formulas; in which case we write  $\vec{a} \equiv_{\text{qf}} \vec{b}$ ,  $\vec{a} \equiv_{\text{simple}} \vec{b}$ , respect

**Lemma 2.7.4** *Let  $L$  be an arbitrary language. Suppose that an  $L$ -theor following property:*

Whenever  $M$  and  $N$  are models of  $T$ , and  $\vec{a} = a_1, \dots, a_n$ ,  $\vec{b} = b_1, \dots$  tuples of elements of  $M$  and  $N$ , respectively, then  $\vec{a} \equiv_{\text{qf}} \vec{b}$  implies  $\vec{a} \equiv_T \vec{b}$ .

*Then  $T$  has quantifier elimination.*

**Proof.** Assume that  $T$  has the property in the statement of the L Lemma 2.7.2 we have to show that every simple  $L$ -formula is  $T$ -equ quantifier-free formula in the same free variables. So, let  $\exists v\phi(v, \vec{w})$  t formula, with  $\vec{w} = w_1, \dots, w_n$  the free variables. Let  $\vec{c} = c_1, \dots, c_n$  constants; we write  $L_{\vec{c}}$  for  $L \cup \{c_1, \dots, c_n\}$ .

Let  $\Gamma$  be the set of all quantifier-free  $L$ -formulas  $\psi(\vec{w})$  such that

$$T \models (\exists v\phi(v, \vec{c})) \rightarrow \psi(\vec{c})$$

# A lot of packages

Necessary for examples in this presentation.

Improve page margins, mathematics, paragraph indent, language, images and more.

Find a template including the most important packages from Vincent's website, on

# Equation

```
The trigonometric identity is
$ \sin^2(\theta) + \cos^2(\theta) = 1 $.
```

```
The trigonometric identity is
\begin{equation}
    \sin^2(\theta) + \cos^2(\theta) = 1.
\end{equation}
```

De trigonometric identity is  $\sin^2(\theta) + \cos^2(\theta) = 1$ .

De trigonometric identity is

$$\sin^2(\theta) + \cos^2(\theta) = 1. \tag{1}$$

# Align

---

The double-angle formula can now be rewritten as

```
\begin{align}
    \cos(2\theta) &= \cos^2(\theta) - \sin^2(\theta) \\
    &= 2\cos^2(\theta) - 1.
\end{align}
```

---

The double-angle formula can now be rewritten as

$$\cos(2\theta) = \cos^2(\theta) - \sin^2(\theta) \tag{1}$$

$$= 2\cos^2(\theta) - 1. \tag{2}$$

# Align

---

The double-angle formula can now be rewritten as

```
\begin{align}
    \cos(2\theta) &= \cos^2(\theta) - \sin^2(\theta) \\
    &= 2\cos^2(\theta) - 1.
\end{align}
```

---

The double-angle formula can now be rewritten as

$$\cos(2\theta) = \cos^2(\theta) - \sin^2(\theta) \tag{1}$$

$$= 2\cos^2(\theta) - 1. \tag{2}$$

# Align

The double-angle formula can now be rewritten as

```
\begin{align}
\cos(2\theta) &= \cos^2(\theta) - \sin^2(\theta) \\
&\stackrel{\text{\nonumber}}{=} 2\cos^2(\theta) - 1.
\end{align}
```

The double-angle formula can now be rewritten as

$$\begin{aligned}\cos(2\theta) &= \cos^2(\theta) - \sin^2(\theta) \\ &= 2\cos^2(\theta) - 1.\end{aligned}\tag{1}$$

\int | \quad \text{dod} | \quad \text{neq} | \quad \text{x}\text{to } 0 | \quad \text{equation} | \quad \text{align} | \quad \text{\nonumber} | \quad \text{align\*}

# Align

---

The double-angle formula can now be rewritten as

```
\begin{align*}
    \cos(2\theta) &= \cos^2(\theta) - \sin^2(\theta) \\
    &\equiv 2\cos^2(\theta) - 1.
\end{align*}
```

---

The double-angle formula can now be rewritten as

$$\begin{aligned}
 \cos(2\theta) &= \cos^2(\theta) - \sin^2(\theta) \\
 &= 2\cos^2(\theta) - 1.
 \end{aligned}$$

# Align

We do this with the double-angle formula

```
\begin{aligned*}
    \cos(2\theta) &= \cos^2(\theta) - \sin^2(\theta),
\end{aligned*}
```

which we can rewrite as

```
\begin{aligned*}
&= \cos^2(\theta) - (1 - \cos^2(\theta)) \\
&= 2\cos^2(\theta) - 1.
\end{aligned*}
```

We do this with the double-angle formula

$$\cos(2\theta) = \cos^2(\theta) - \sin^2(\theta),$$

which we can rewrite as

$$\begin{aligned}
&= \cos^2(\theta) - (1 - \cos^2(\theta)) \\
&= 2\cos^2(\theta) - 1.
\end{aligned}$$

## Chemical formulas `\usepackage{mhchem}`

```
\ce{CO2 + C -> 2 CO}\\\$\\ce{CO2 + C -> 2 CO}\\\$\\
\ce{CH4 + 2 \left(\ce{O2 + 79/21 N2}\right)}\\$ % Error
```

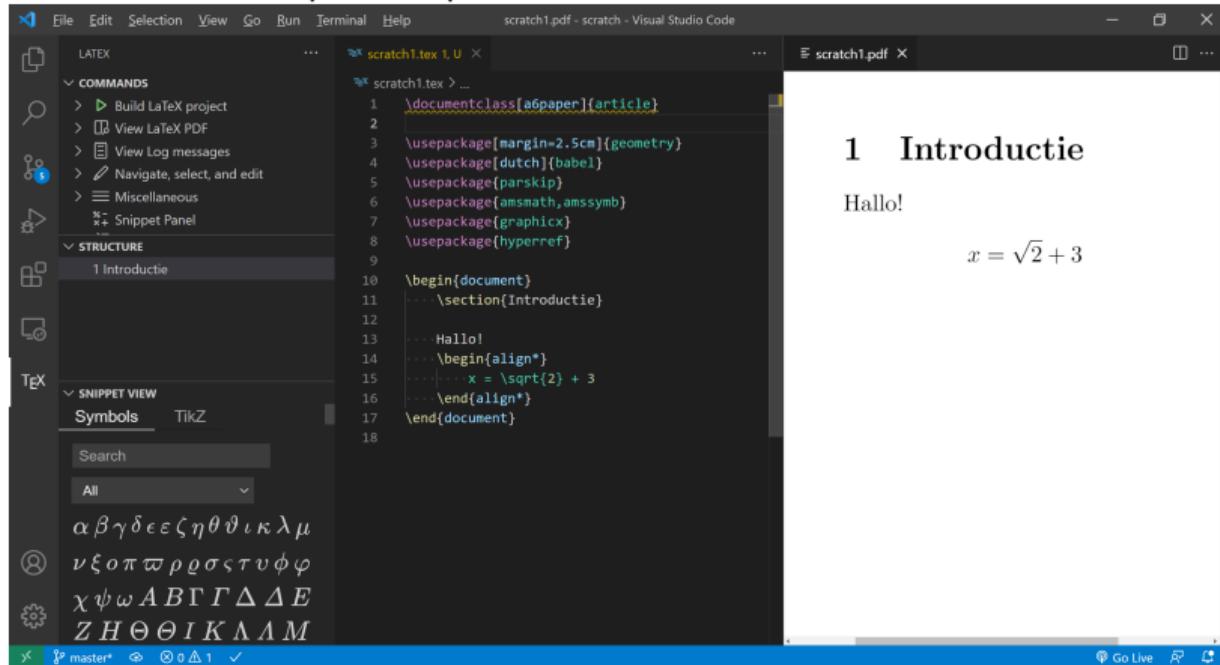

Some examples are taken from the `mhchem` package documentation (see below)

More example can be found in the documentation of `mhchem`, see

<https://ctan.org/pkg/mhchem>

# Installation

[vkuhlmann.com/latex/installation](http://vkuhlmann.com/latex/installation)

The screenshot shows a Visual Studio Code interface for a LaTeX project named "scratch1".

- Left Sidebar:** Contains icons for LATEX, COMMANDS (with options like Build LaTeX project, View LaTeX PDF, View Log messages, Navigate, select, and edit, and Miscellaneous), and STRUCTURE (with a single section titled "1 Introductie").
- Central Area:** A code editor window titled "scratch1.tex 1.0" showing the following LaTeX code:

```
\documentclass[a6paper]{article}
\usepackage[margin=2.5cm]{geometry}
\usepackage[dutch]{babel}
\usepackage{parskip}
\usepackage{amsmath,amssymb}
\usepackage{graphicx}
\usepackage{hyperref}

\begin{document}
\section{Introductie}
Hallo!
\begin{align*}
x &= \sqrt{2} + 3
\end{align*}
\end{document}
```
- Right Area:** A preview window titled "scratch1.pdf" showing the rendered document with the title "1 Introductie" and the text "Hallo!".
- Bottom Status Bar:** Shows the file path "scratch1.tex", the branch "master", and other status indicators.

## 1 Introducing

Hello!

$$x = \sqrt{2} + 3$$

Sometimes you might need to compile multiple times.
